Scotland's whisky producing regions are as diverse as the wine regions of France. They craft single malt whiskies with distinct qualities and characteristics borne out of their location, climate and hundreds of years of craftsmanship.

The different personalities of the Classic Malts reflect these distinctive regional variations

S P E Y S I D E

Generally accepted as a subdivision of the Highlands Region, over half of all Scotland's distilleries are located in Speyside. Speyside malts are typically the sweetest of all Scotch Whisky Malts and many of the most popular single malts are produced in Speyside.

The huge selection of Speyside malts offer a variety of strengths and can generally be broken down into two categories: the heavy, rich sherry-flavoured malts and the more complex light floral-flavoured malts. Speyside malts are essentially sweet whiskies, although some can have a little peaty character with just a slight whiff of smoke.

There are eight distilleries on the island of Islay (pronounced Eye-luh). Islay is located in the Inner Hebrides of Scotland. The island is often lashed by sea winds and rain, these elements certainly have a say in the whisky production.

Islay's surface is very flat and consists largely of peat, which has a huge influence on the flavour of the whiskies produced here.

Islay whiskies are the strongest flavoured of all Scotch whiskies and tend to be dry and peaty. They are renowned for their strong peaty smokiness which comes from the peat fuel they use for malting the barley.

The character of Islay malt whiskies are very often described as being very smoky and medicinal, salty and sea weedy with a dry finish and sometimes with a strong bite.

The Islands are not officially a whisky region, However are another subdivision of the Highlands Region. The Islands are a geographical region rather than a characteristic one. The Islands region includes all of the whisky producing Isles of Scotland namely Mull, Skye, Orkney, Arran, Jura and Lewis. The Isle of Islay is considered a region on its own.

Due to the location of the Islands distilleries, their whiskies tend to have a coastal feel. They are slightly peatier in character than most highland malts but not to the extent of the peatiness that you would find in Islay malts. The peatiness is generally softer and sweeter than their stronger cousins from Islay.

Lies towards the end of the Mull of Kintyre peninsula on the West Coast of Scotland. Today there are only three distilleries producing whisky here, but in days gone by there were over 30 distilleries.

The Campbeltown single malts are very distinctive, tending to be full-bodied, renowned for their depth of flavour and for their slightly salty finish. With peat adding a hint of flavour similar to that found in Islay malt.

KILKERRAN 12 yrs

Oak notes are dominant, followed by toasted marshmallows and dried fruit pudding, as well as cherries, marzipan and a hint of peat.

L O W L A N D

Lies South of an imaginary line that runs from Greenock on the West coast of Scotland to Dundee in the East. Most of the Lowland malts produced in this region end up in blends, but there are still a few single malts available to try from this region. Malts from this region are light in colour and have quite a dry finish. The dryness comes from the malt itself, not from peat as Lowland malts tend to be produced with unpeated malt. You may also find a certain sweet fruitiness to the flavour. Lowland malts are regarded as an excellent aperitif. Generally speaking, Lowland region whiskies are mellower than whiskies from the neighbouring Highlands, and are very much appreciated by those new to malt Whisky and experienced malt drinkers alike.

H I G H L A N D

By far the largest of all the whisky producing regions and offers the greatest variations of style. You will find some of the best known distilleries in this region. On the mainland in the Western Highlands there are only a few distilleries. The malts from these West Highland distilleries are much less peaty than the malts which are found in the Islay region, although you can detect a slight whiff of smokiness. If there was a common character shared by West Highland whiskies it is that they tend to have a sweet start and dryish finish. The character of the far North Highland malts is greatly influenced by the local soil and the coastal location of the distilleries.

They tend to be light-bodied whiskies with a spicy character and a dryish finish, sometimes with a trace of saltiness.

Malt whiskies from the Central, Southern and Eastern Highlands are a mixed bunch. They are generally fruity and sweet but not as sweet as the malts found in Speyside. They are lighter bodied and sweet and, just like other Highland malts, tend to have a dry finish.

This type of whiskey (as Americans call it) may often be categorised as pertaining to toastiness, spice and vanilla sweetness. This is in large part due to the generous use of new charred oak (predominant in most styles of US whiskey, and used exclusively in the production of bourbon), which lends stunning sweet flavours such as vanilla and other flavour compounds. To be called bourbon, it must be at least 51 percent corn. (Most distillers use 65 to 75 percent corn.) Bourbon, by law, must be aged in a brand-new, charred white oak barrel.

Rye whiskey is made with a mash bill that mainly features rye. The result is a spicy whiskey with lots of complexity.

Tennessee whiskeys are essentially bourbons which undergo the "Lincoln County Process. This involves filtering the spirit through sugar maple charcoal.

Kentucky straight whiskeys must be aged in a brand-new, charred white oak barrel to be called straight bourbon whiskey- that means, a barrel can only be used once for bourbon.
